ISCO Announces National Distribution Agreement with Aquatherm

Louisville, Ky. (August 13, 2020) - ISCO Industries, Inc. (ISCO), a Louisville-based high-density polyethylene (HDPE) total piping solutions provider, announces an agreement to sell Aquatherm polypropylene piping systems across the entire United States.

"We are excited to expand our relationship nationally with Aquatherm," said Jimmy Kirchdorfer, ISCO CEO. "They were the first supplier to enter the polypropylene market in North America. Through a lot of hard work and business development they have become the clear brand leader. ISCO is well positioned to deliver value-added services ensuring a successful Aquatherm installation. It is an exciting time to expand our relationship and jointly grow the Aquatherm presence across the country.

The North American arm of Aquatherm GmbH, Aquatherm established the polypropylene piping market with hundreds of successful installations in commercial, institutional, industrial, and other applications.

Aquatherm CEO Jordan Hardy explained that bringing ISCO on as a national distributor is extremely promising. "As a market leader in polypropylene piping systems, we always look to align with the best partners in each market and our companies share many of the core beliefs and skillsets of being solution providers and focusing on the needs of our customers, so it is a natural fit," Hardy said.

ISCO has a national fusion equipment footprint, a network of fabrication facilities that can simplify installation on-site, and a large group of experienced, qualified field fusion technicians available to assist. In addition, ISCO has a project management team, experienced in the polypropylene market, ready and available to help anywhere in North America. As the companies join forces, ISCO is excited to continue to provide total piping solutions to our customers.

ABOUT ISCO Industries

Since 1962, ISCO Industries, a global total piping solutions provider headquartered in Louisville, Ky., has stocked and sold a wide variety of HDPE pipe and piping materials. ISCO offers custom piping fabrication to provide solutions for multiple applications such as: industrial, municipal, power, marine, nuclear, oil and gas, mining, waterworks, environmental, geothermal, golf, culvert-lining and landfill. The company also rents, services and sells McElroy fusion equipment. ISCO has more than 35 locations in North America – inventorying large stockpiles of HDPE pipe and piping products. For more information on ISCO, visit www.isco-pipe.com or call 1-800-345-ISCO.

ABOUT Aquatherm

Aquatherm's low material, installation, and nonexistent maintenance costs, combined with sustainability and code approvals and listings, position it as the piping system of the present and the future.
